
ServerZip is a powerful, server-based compression utility that provides a range of features: [Zip files for HTTP, FTP, or NNTP.](#) [Compression of files using the standard ZIP format.](#) [Automatic, on-demand compression and compression upon file change, for the server-based execution of Active Server Pages, COM, or other scripting languages.](#) [Automatic, on-demand zip file creation to provide HTTP or FTP access to a compressed version of files on the Web, available on demand.](#) [Fully automated, on-demand web page creation for the on-demand access of compressed files across the Web.](#) [Allows the optional use of a password to prevent unauthorized access to the compressed files, by encrypting the zip files on the server.](#) [Can be used to compress and/or delete archives on demand.](#) [Can be used to allow remote control of the compressed files.](#) [Can be used to control user access to files on the server.](#) [Can be used to allow remote data backup for shared files across the Internet.](#) [Can be used to allow remote data access for remote offices.](#) [Can be used to quickly create pre-configured archive lists for other utilities to access. The zip file will not be accessible by web browsers. It is useful for offline use, or as a preview of how a particular server is configured.](#) [Basic Scripting You can use ServerZip to create zip archives on demand for accessing your files on the server. You can then create a pre-configured listing of files that can be delivered across the Web or Intranet as a zip file. Web Pages ServerZip provides the ability to create a listing of files on the server, that can be delivered on the Web or Intranet as a zip file. ServerZip includes a wizard to create zip files for files on the server. The wizard will create a zip file in a specified directory for all files, or files within a sub-directory, on the server. The wizard provides a range of options to control file listing: \[Specify if matching files in all sub-directories, or all the contents of those sub-directories, are to be included in the zip file.\]\(#\) \[Include a hyperlink in a Web page for the user to collect the compressed file remotely across the Web\]\(#\) \[70238732e0_corel.draw_x7.serial.key.rar file\]\(#\)](#)
