FullShot Enterprise Edition (Professional Version) is a professional version of FullShot that includes a powerful screen capture tool with many additional features. These features allow you to create screen capture images using screen capture technology that is faster, more accurate, and easier to use than competing screen capture tools. With FullShot Enterprise Edition, you can take "snapshots" of Windows screens, along with any documents, images, or active applications on your PC. These screen captures can then be saved to disk or directly printed to any printers connected to your PC. Additionally, the FullShot Enterprise Edition includes a host of features that can simplify and speed up the process of creating screen capture images in the field, such as: • Automatic Screen Capture - Allows you to take screen captures that are positioned at a specified location on your desktop, or any images on any other windows • Region Capture - Allows you to take screen captures that include only a specified region of your screen • Print Screen - Allows you to create a permanent printout of any captured screen • Quick Print Screen - Allows you to quickly create a printout of any captured screen, or of any existing image • Full-screen Print Screen - Allows you to create a printout of any captured screen or of any image in the Full-screen state • High DPI (High-resolution Print Screen) - Allows you to create a printout of any captured screen or of any image in the Full-screen state • Zoom In (Zoom) - Allows you to make any captured screen or image larger, or fit the image into the capture region • Zoom Out (Zoom Down) - Allows you to make any captured screen or image smaller, or fit the image into the capture region • Free Move - Allows you to drag and drop any captured screen or image to any other region on the screen • Record Audio While Screen Capturing - Allows you to record any audio that plays while capturing a screen • Screen Capture to PowerPoint - Allows you to directly create a screen capture image that can be inserted into Microsoft PowerPoint FullScreen Capture Creating screen capture images that are large and accurate is not easy. When you view images on a web page, for example, it's difficult to figure out if the image is exactly the size you want, or if there is any margin on either side. The FullScreen Capture feature allows you to quickly capture a screen image that is the exact size you want, and that is placed in any location on the screen. When

What's New In FullShot Enterprise Edition?

FullShot Enterprise Edition allows you to provide your business with an alternative means to distribute screen capture books, videos, brochures, flyers, manuals, and other materials to your customers. FullShot Enterprise Edition is designed to be installed and run on a Windows Server. It includes all the functionality of the standard FullShot (Windows only) application but with additional features to support screen capture applications, recordables, and screencasts. FullShot Enterprise includes recording functions, exporting videos and images to a variety of formats, and supports multi-tasking while recording screen capture data. It's a tool that enables your business to share applications, documents, pictures, and graphics with your customers in a professional manner that is cost effective and free of hardware and software piracy. FullShot Enterprise Edition includes the following: Up to eight people can simultaneously record screen capture data from the computer with the free 8MB of the hard disk. FullSource Screen Capture features: The standard FullSource screen capture application is now included with FullShot Enterprise Edition. FullSource is the world's most powerful screen capture technology that captures windows in any form (desktop, menus, toolbars, popup menus, and more), with no memory limitations. FullSource provides the tools and flexibility that allow users to capture screen in a very fast manner. FullSource enables users to capture any screen window by placing the cursor in the desired screen area and pressing a button. FullSource captures the window that is most convenient to users and allows them to capture any window for any application. FullSource Screen Capture provides support for multiple monitors. You can capture multiple screens simultaneously from any application. FullSource allows users to "walk through" a screen. FullSource is completely integrated with Windows and uses no special hardware. It works with any computer that has a keyboard and a standard monitor. It works with any copy protected material, and it is designed to support digital rights management (DRM) requirements. FullSource is a powerful Windows-only screen capture technology that is a core component of FullShot Enterprise Edition. Multi-tasking during recording: Record screen capture data while using other applications. Recordings are triggered only when the Windows Task Bar is not displayed. FullSource requires an operating system reboot after changes are made to recordable registry entries. Up to 128MB of RAM support: When FullSource's recordable registry entries are enabled, FullSource allows up to 128MB of RAM to be allocated for it. Hardware accelerated: FullSource recordings can be hardware accelerated, allowing for higher performance and higher quality when

compared to standard screen captures. Easily review recordings: FullSource recordable registry entries support automatically saving the recorded screen capture data directly to a file in a standard .jpeg format. File exporting support: Export screen capture data in a variety of formats including .jpg, .png, .gif, .psd,.
