similarly, if you want to change the location of the mpc-akai force window, simply drag it where you want it on the desktop or from another application, and then close the mpc-akai force window (you can always double click the 'akai force' text on the taskbar). i also loaded it up on a fender rhodes keyboard (from the late seventies) to see how it would work with these old synths (and indeed it was great). this was new to me, as i had always used the keyboard face as the keyboard, so this was fun. sounds a little fuller though its not the real full punch of the mpc. however, the delay is top quality, the sounds are straight out of the box and arranged much more like a traditional keyboard synth, and you have access to a nice selection of external synths. theres a good selection of reverb, delay and modulation effects, which are easy to use and apply. i found myself wanting to use the great arp but your limited to the usual, sequencer, or drum machine effects. i also got a nice touch of scratch from a scratched guitar i had in the studio, and theres a good selection of arpeggiation effects too. finally there was a nice germanium pad. the mpc 2.11 software has the ability to work both as a stand alone or as a desktop software application. the advantages of working from the desktop version include: full control over your software parameters in the arrangement window when editing, a much faster workflow, the ability to export tracks as mp3, wav or aac files, and you can also record patterns and run automation. the mpc 2.11 software offers exclusive features and powerful editing tools to give you more creative control over your music. the mpc 2.11 software comes with powerful features like full screen editing for instant inspiration, integrated fx plug-ins, a flexible and expanded set of performance controls, and a long list of add-ons for additional creative enhancements to your mpc.

at this point you need to be pretty keen on learning how to navigate the software to get the job done. for a novice like me, this was a great chore because i couldnt figure out how to navigate the program. i found the menu structure odd and i didnt know what most of the icons were and where to find them. in the end i had to watch a video on how to navigate the mpc software for the first time. it is true that the hardware interface sounds pretty good, and it is possible to record and produce drums with this interface very easily. but for me the main reason for getting this interface was the software. the fact is that the professional audio industry is moving to a software based interface. this will change the way we make music in a big way. here is a look at some of the software features. if theres one thing that sold me on the akai mpc, its the fact that it has never failed me, ever. its always kept its promise and never let me down, so long as ive had it. yes ive had to re-order the akai mpc software disk a few times, but that wasnt a big deal for me. the fact is, the mpc always works, and has been a dependable piece of equipment for me. lets talk about some of the features of the mpc software. first, the most important feature is the recording tab. in the recording tab, there are 7 blank slots for recording or writing tracks. you can edit the tracks that are recorded. i do all of my music on the recording tab and then export it. with the mpc software, you can record with up to 8 tracks at a time. its also very easy to navigate through the software. you can navigate to the disk with the mpc software on it, navigate to the session and find your tracks, or navigate to the song and find the drums youre looking for.
